

Dental Instruments Catalogue

WAHA
INDUSTRIES

Manufacturers, & Exporters of Surgical/Dental &
Orthodontic Instruments.

IMPORTANT INFORMATION

QUALITY SERVICES & CUSTOMER SATISFACTION

To provide "Excellent services and economically prices" is the motto of our business. All instruments are made of stainless steel other wise specified.

All instrument are stamped with words "stainless Pakistan or any other country to whom manufactured buyers own brand may also be engraved on demand, "Die-Sunk" procedure is generally used.

Special items can also be supplied if sketch, drawing or samples are provided to us or refer any reference from reputed catalogue for our guidance.

All kind of Surgical instruments of stainless steel made the specific material according to its use.

Specification of material used in production.

Cutting Instruments

For (scissors, Cutter)	Stainless steel AISI-410/420 (Rock-well hardness-48 to 58) Hot drop forged
For (Forceps, Holding Clamp)	Stainless steel AISI-410/420 (Rock-well hardness-42 to 48) Hot drop forged
For (Scalpel, Handles)	Stainless steel AISI-420 (Rock-well hardness-48 to 58) Hot drop forged
For (Speculums, Retractors)	Stainless steel Sheet-300 Series 18/8 (18% Chromium & 8% Nickel)

Please Note:

The delicate, hand-crafted surgical instrument use only for its intended purpose to Ensure effectiveness and maximum life. Proper care must be given during cleaning, sharpening and sterilization to preserve design and integrity and to prolong usefulness. Do not expose instruments to sterilization temperatures above 350° F/177° C or to higher than recommended chemical concentrations." Longer Life for Surgical Instrument" for proper cleaning, sterilization and other instrument care.

Inspected the instrument after each use for: pitting; corrosion; discoloration; broken, loose or bent components; cracked handles; dull cutting edges; over sharpened or worn out blades; chipped or peeled plating; damaged hinges, beaks or blades. Instruments found to Have these or other compromising conditions should be removed from service.

QUALITY MANAGEMENT SYSTEM

WAHA INDUSTRIES. is an employee owned company of Craftsmen and has got a good reputation for quality and reliability. Our significant manufacturing steps are being described here-under briefly:

1. **MATERIAL TESTING:** The purchased raw material is thoroughly tested under PQA. authority. A rigid quality control policy is being adopted before releasing to production. This test is taken to check the standard of steel as per desired specifications and is considered the most important factor of our business.
2. **FORGING & HAMMERING:** After testing, the stainless steel strips/bars are divided into different sizes as per our requirements and our highly experienced craftsmen are specialized in forging (Hot/Cold Drop) to perform all standard press operations in forming and deep drawing of all type of instruments. We anneal the forging and prepare for the milling process.
3. **MACHINE & TOOL WORK:** Our highly skilled technicians have a great knowledge about machine milling process. We form accurately male/female portion of box-joint forceps, as well as, serrations/ratches in uniformity. We are equipped to mill, drill, bore turn and grind all type of metals. We have in house facility of custom tool and die production, maintenance and repair.
4. **FILLING:** We are specialized in handmade fabrication. First, we assemble male/female portion after setting/adjusting of Extracting Forceps and Scissors, tips, serrations, ratches in uniformity and file precisely to make it semi-finish under strictly quality control specifications.
We are now moving from basic hand manufacturing techniques to mechanization to production run.
5. **HEAT TREATMENT:** All instruments are being tempered maintaining "Rock-Well Hardness" for Extracting Forceps & Retractor 45° to 50° degree and Scalar, Gauges and Scalpel 50° to 55° degree. A test is taken to check the hardness after tempering of each lot to maintain the uniformity and, before proceeding further, we clean all instruments by various chemicals. In addition, we will buy specialized Q/C equipment in near future to meet special customer Q/C. Specifications.
6. **RIVETING & WELDING:** We perform a wide variety of assembly operations from prototype quantities to production run. We rivet precisely each instrument such as, Extracting Forceps & Retractor, etc. But, for some kind of instruments, we use spot welding.
7. **GRINDING & POLISHING:** For precise grinding and excellent finish, we specialize in applying polishing wheels to belts to improve the overall finish in high uniformity utilizing best of polishing luster. We use electro-plating plants to polish serrations/ ratches and joints of stainless steel instruments. For satin/matt finish instruments, we use glass heads to achieve uniformity. All instruments are being polished under rigid quality control specifications.
8. **PASSIVATION:** This method actually provides the instruments with its corrosion resistance properties. Passivation, which follows the final polishing step, is a chemical bath, which creates an oxidized layer on the surface of instruments. We are now equipped with most modern process.
09. **ULTRASONIC CLEANING:** We are full equipped with most modern ultrasonic cleaning plants imported from "Branson Cleaning Equipment Co. USA", and all instruments are being cleaned properly utilizing various chemicals such as, Tri-Chloroethylene etc.
10. **INSPECTION & STAMPING:** We inspect all instruments under rigid Q/C. specifications and give the assurance to our relative clients that all instruments shall be free from all defects such as, burrs, sharp edges, cracks, pitting, scratches, grease / excessive oil and foreign matters etc. We also guarantee for its workmanship. For stamping, we use both process i.e. die sunk and electrolytic marking and are being marked under customer's specifications.
11. **PACKING, LABELING AND BAR CODING:** We pack all instruments under strictly Q/C. specifications as per customer's demand. Normally, we pack individually in poly bag and further 12 pieces in one box mentioning outside with Part Number, Description and Lot Number. All instruments are packed in poly bags/plastic/colour bags, Blister Packing with adequate desiccant in each poly bag to absorb moisture. We are specialized in packaging, labeling and bar coding as per customer demand.

EXTRACTION FORCEPS # ATRAUMATIC

1. "Blade Beaks" smoothly penetrate in contact with the root.
2. They has large contact surface for a secure grip.
3. They take care of the tissues and assure tooth fracture risk reduction.
4. They give better control over the root during the extraction operations.

EXTRACTION FORCEPS # SECURE

Secure-Line Extraction Forceps

These forceps will allow you to complete any extraction and work more efficiently even if complications arise. If teeth break during extraction, these are the tools you need to rapidly, safely solve your problems. These forceps have special, all-purpose, jaws designed to cover a broad range of applications and have sharp pointed tips that allow separating the tips of roots from surrounding tissues by lightly twisting them and then securely trapping the extracted roots in the gaps between their jaws.

HANDLES FOR ROOT ELEVATORS POINTS A, B, C, D, E, F

ROOT ELEVATOR

Function of Root Elevators: To loosen tooth or root from bony socket prior to placement of the extraction forceps.

Dental Root Elevators

To look at one of these instruments you might mistake it for a narrow screwdriver.

That's because just like one an elevator has a handle and then a specially designed "blade" or tip portion.

How they're used.

The tip of an elevator is designed to be wedged into the ligament space between a tooth and its surrounding bone (as shown in our animation).

As the elevator is forced into and twisted around in this space, the tooth is rocked around and pressed against the walls of its socket.

This helps to both expand the shape of the socket and separate the tooth from its ligament.

As this work is continued, the tooth gradually becomes more and more mobile.

In some cases, the dentist may be able to completely remove the tooth just using their elevator.

If not, they will choose a point where they feel they have accomplished as much as they can with it and will then switch to using extraction forceps.

LUXACUT

Luxacut Luxation Instrument

Over recent years, there has been an increased demand for reduced trauma during extraction procedures. The use of elevators has become widespread for the loosening of teeth before the application of forceps. Luxation instruments tips are more finely tapered than elevators tips. Their characteristics are a combination of a Periotome and an elevator. The sharp tip enables more efficient cutting of the periodontal ligament, whilst the tapering shaft assists with controlled expansion of the bony socket. The extraction operation may be performed with the minimum amount of tissue damage. Healing is therefore quicker and the operation is less distressing for the patient and surgical team alike.

The Luxacut Kit comprises of seven Luxation instruments, a straight, curved, inverted curved & contra blade version in Three different widths. Also available in dual edge blades

- **L2-196-L2S** Straight Blade- Green-2 mm- Apical and/or Interproximal
 - **L2-198-L3C** Curved Blade- Black- 3 mm General use/Starter
 - **L2-197-L3S** Straight Blade- Grey- 3 mm Interproximal
 - **L2-200-L3CA** Contra Angle- Blue- 3 mm Lingual and/or distal-Molars
 - **L2-199-L3IC** Inverted Curved- Light Blue- 3 mm- General, Lingual and/or Distal
 - **L2-202-L5C** Curved Blade- Brown- 5 mm- Large molar roots- General use
 - **L2-201-L5S** Straight Blade- Yellow- 5 mm- Interproximal
 - **L2-203-DE3** dual edge/straight grey 3 mm/1.5 mm
 - **L2-204-DE5** dual edge/straight brown 5 mm

LEXER Dental Hand Instruments

The types of hand instruments can be categorized based on their function:

- Examining the mouth and teeth
- Scaling or professional cleaning of teeth
- Cutting teeth and removing cavities
- Placing and condensing filling materials
- Carving and finishing dental fillings
- Miscellaneous types
- Instruments used for examining the mouth and teeth

Mouth mirrors are used to examine the condition of the teeth and mouth, as well as to retract the tongue and cheeks upon examination.

Probes— There are many probes available but the main types are the straight probe, Briault probe and periodontal probe.

The straight probe is sharp and it is used to examine cavities in the dentine region as well as to check the margins of restorations or fillings.

The Briault probe is also sharp and it is used to detect the junction between the enamel and dentine. Briault can also be used to detect tartar hidden in the gum pockets.

A periodontal probe can be used to measure the depth of the gum pockets and for other measurements. Instruments for cutting and scraping tissues and deposits

Scalers remove tartar (calculus) on the tooth surface as well as those hidden in the gum pockets. They can also be used to remove other surface deposits and temporary crowns.

Excavators are used to remove softened dentine and temporary fillings. The back of the blade can also be used for placing linings between filling materials. Sometimes excavators can be used for carving metal or amalgam fillings.

Chisels are used to remove unsupported enamel during cavity preparation. Unsupported enamel can be harmful for it can compromise the longevity of the filling if not removed.

Hatchets and hoes have similar purposes to chisels. Instruments used for placing and condensing filling materials Plastic instruments convey and shape filling materials and are usually flat blades that do not use heavy pressure.

Some instruments have rounded ends for shaping and burnishing the surfaces of fillings. Plastic instruments are usually made of stainless steel for most materials though there are also thin Teflon-coated or titanium nitride instruments which are non-stick for composite fillings. **Condensers or pluggers** are used for compressing and forming filling materials. Heavy pressure is applied on use therefore these instruments are usually used for metal or amalgam fillings. Instruments used for carving and finishing fillings Carving and finishing instruments have sharp or semi-sharp blades of various shapes. They are used to carve materials by cutting and scraping.

VALUED BUYERS

Compare our scalers and curettes with the best in the industry and you will immediately recognize we are equal in every way but one... price. Note the deep precision knurling for better tactile feel. The same high-grade stainless steel tips, the same light weight (under 20 grams) for less hand fatigue, the same professional craftsmanship, and surpassing the highest industry standards. Of course, any manufacturer can make these claims, but we guarantee and certify ours. We regularly manufacturing below articles in showing handles & pattern for better grip & perfection. We are also fully equipped & capable to develop these instruments as per your own specific requirements & demands in materials, sizes, shapes and patterns.

GINGIVAL CORD PACKERS For atraumatic and accurate cord placement.

L3-378 BN1 Thin blade and rounded contour facilitates use in both thick and thin tissues without catching or dropping cord. Bilateral notch allows placement in limited access areas.

L3-379 S6 Ideal blade thickness with angle and blade shapes similar to the IPC carver.

L3-380 CSI-1 Serrated Also available non-serrated CSI-1 (GCPCSI1NS).

L3-381 113 Serrated Also available non-serrated 113 (GCP113NS).

L3-382 Balshi Small and thin non-serrated blade shape.

L3-383 1 Yardley Round non-serrated working end.

L3-384 7 Guyer Serrated Also available non-serrated 7 Guyer (GCPG7NS).

GCP56 accurate cord placement with minimal tissue trauma

CARVERS

Used to carve anatomical features and trim excess materials.

L3-416 Inter-proximal Extremely thin, flexible blade; ideal for interproximal contouring.

L3-417 Inter-proximal Off-Angle Extremely thin, flexible blade. Off-Angle provides better access to posterior areas.

L3-418 1/2-3 Hollenback Universal adaptability. Ideal for placing, carving and contouring amalgam.

L3-419 3S Hollenback Design characteristics similar to 1/2 Hollenback but with slightly larger blades.

L3-420 3 Hollenback Design characteristics similar to 1/2-3 Hollenback but with significantly larger blades.

L3-421 8 Wiland Minn.IPC1 Extremely thin curved blade; ideal for adapting to interproximal surfaces.

Maxiofacial Surgery Instruments

A Bard-Parker handle with a No. 15 blade is the usual scalpel used to make incisions on the gums where a flap can be raised to gain access to tooth.

Retractors

Tongue, cheek and flap retractors are needed to provide adequate access to the tooth and are legion in number.

Needle Holders and Sutures

Sutures are used to replace and secure the gum flap in its former position, to limit the size of the wound and therefore restrict subsequent contamination with food debris, and to assist in controlling bleeding. The usual suture size for intra-oral work is 4/0 and the material may be absorbable or non-absorbable Scissors
Dissecting scissors and suture-cutting scissors are usually used.

Artery Forceps

These are designed to hold soft tissue without damaging it. College tweezers are used to lift up sutures prior to removing them.

Periosteal Elevators

A number are available and are similarly used like a normal elevator but periosteal elevators have two heads – one at each end. One end is sharp-tipped to expand the tooth socket while the other has a blunt end to remove granulation tissues or raise a gum flap.

Chisels and Mallet

Chisels are more appropriate in the operating theatre and are particularly useful for disto-angular third molars and upper wisdom teeth extraction.

Bone Curettes

The Mitchells trimmer is probably the most valuable instrument in the category and is used to remove granulation tissue in the tooth socket.

Bone Ronguer and Bone File

Used to smoothen any sharp bone edges after tooth extraction is done.

orthodontics pliers in Clinical Dentistry Orthodontics and Dentofacial Orthopaedics

Driven by the demand for tooth alignment, general practitioners are increasingly being asked to provide orthodontic treatment.

Dentists keen to participate in this area of expertise need to demonstrate the skills to identify suitable patients, the ability to provide conventional and contemporary orthodontic treatment and be aware of its limitations.

This is exactly what this programme delivers, along with the vital core competencies to excel in this unique postgraduate area.

The objective of the Orthodontics and Dentofacial Orthopaedics is to provide dental surgeons with the core knowledge and clinical skills essential for the delivery of competent, high-quality dental care.

It encompasses a blended learning approach and consists of a combination of lectures, seminars, workshops, clinical case discussions and laboratory sessions.

The flexible modular structure enables the programme to meet a wide range of student needs.

- Щипцы для ортодонтии и протезирования

L5-001
Cap Removing Plier

L5-002
1-Distal End Cutter
This instrument cut wires close to the buccal tube and safely holds the distal end. The tungsten Carbide insert ensure precision cutting, long wear and unsurpassed cutting performances.
Maximum Cutting Capacity:
arch wires up to .021"x.025"(.55mx.64mm)

L5-003
1-Distal End Cutter Flush Cut with Safety Hold
This instrument cut wires close to the buccal tube and safely holds the distal end. The tungsten Carbide insert ensure precision cutting, long wear and unsurpassed cutting performances.
Maximum Cutting Capacity:
arch wires up to .021"x.025"(.55mx.64mm)

L5-004
Micro Ligature
Cutter
Maximum Cutting Capacity:
.008" (20mm)
Maximum Cutting Capacity:
.012" (30mm)

L5-005
1-Distal End Cutter Flush Cut
This instrument cut wires close to the buccal tube and safely holds the distal end. The tungsten Carbide insert ensure precision cutting, long wear and unsurpassed cutting performances.
Maximum Cutting Capacity:
arch wires up to .021"x.025"(.55mx.64mm)

L5-006
Hard wire cutter 15° Degree Angle
Easily Cuts any Size arch wire or Pin. The inserted tips ensure precision cutting and perfect tip alignment.
Minimum Cutting and perfect tip alignment. Minimum Cutting Capacity:
.012"(30mm)
Maximum Cutting Capacity:
arch wires up to .012"x.025"
(.55mmx.64mm)

L5-007
Hard wire cutter Standard Straight
Easily Cuts any Size arch wire or Pin. The inserted tips ensure precision cutting and perfect tip alignment.
Minimum Cutting and perfect tip alignment. Minimum Cutting Capacity:
.012"(30mm)
Maximum Cutting Capacity:
arch wires up to .012"x.025"
(.55mmx.64mm)

L5-008
Hard wire cutter, easily cuts any size arch wire or pin. The inserted tips ensure precision cutting and perfect tip alignment.
Minimum Cutting Capacity: .012"(.30mm)
Maximum Cutting Capacity:
arch wires up to .021"x.025"(.55mmx.64mm)

PLIERS FOR ORTHODONTICS & PROSTHETICS

L5-009

Pin Ligature cutter 15° degree angled tips to allow easy access and better visibility to reach in Difficult areas. Inserted tips ensure precision cutting of Ligature wire, pins and elastics. Minimum Cutting Capacity: .008"(.20mm) Minimum Cutting Capacity: .016"(.41mm)

L5-010

Standard Ligature cutter

This cutter has fine tips for easier access to reach difficult areas cuts pins, wire ligatures and elastics. Minimum Cutting Capacity: .008"(.20mm) Minimum Cutting Capacity: .016"(.41mm)

L5-011

Mini Ligature cutter 50° degree angled upper the narrow tip is angled at 50° degree for excellent access to the upper arch. The inserted tip ensure precision cutting of ligature wires and elastics. Minimum Cutting Capacity: .008"(.20mm) Minimum Cutting Capacity: .012"(.30mm)

L5-012

Bracket Removing Plier Angled TC - inserts Sharp beak wedge can easily go under bracket base. Lifts off bracket from tooth surface with no discomfort to patient. Firm grip assures, easy in horizontal and vertical use.

L5-013

Ligature wire forming plier for soft wires up to .014" (.36mm)

L5-014

Crimpable Hook Plier TC inserts The head of these pliers is designed with a slot to fit over the base of the hook for a secure hold. One squeeze and the hook is secured on the arch wire.

L5-015

Cinch back plier

The Serrated tips of this instrument hold the wire securely while bending the wire 90° degree distal to the buccal tube, avoiding patient for use with Nickle Titanium wires .012"x.018"(.30mmx46mm)

L5-016

Johnson countouring plier

Design to add contour or Curvature by crimping trail-fitted Crowns. This Contouring / crimping ensures that the crows fits securely on the patients tooth. slim weingart pliers

L5-017

Adams Plier 325 with hole for retaining elements

L5-018

How Plier (straight)

A versatile utility plier with a long tapered tips and have serrated tips (Also available) in TC-Tip) to prevent wire slippage.

Point Size: 2mm,4mm
Also Available in TC-Tip

45°

L5-019

How Plier (Cvd)

Similar to How Plier (straight) but with 45° degree angled tips for convenient access to lingual and to reach difficult areas. Matching serrated tips hold wires firmly at a convenient working angle.

Point Size: 2mm,4mm
Also Available in TC-Tip

L5-020

Direct Bond Remover (Angled)

Some Features as Direct Bond Remover plier (straight) except the 60° degree angle allows easier access in those to reach difficult posterior areas.

L5-021

Direct Bond Remover (straight)

Force is applied to the bracket tooth interface. The tips are positioned mesially, distally or at the occlusal gingival interface to remove direct bond brackets Safely and Comfortably.

L5-022

Posterior Band Remover (Long)

Some features as posterior band remover plier (short) but with a longer lower band removing arm. Replacement pads are available in 3/16" and 1/8" (4mm) diameters.

Also Available in TC-Tip

L5-023

Posterior Band Remover (Short)

The plastic pad rests on the occlusal surface of the molar which positions to the lower removing tip in the perfect position under the gingival edge of the band. Replacement pads are available in 3/16" and 1/8" (4mm) diameters.

Also Available in TC-Tip

L5-024

Weingard Plier Slim

Precision serrated tips are designed for heavy wires and to prevent the wire from slipping. For easy and safe insertion or removed of all arches.

Holds wire up to .030"(.76mm)
wire bending capacity: .030"(.76mm)

Also Available in TC-Tip

L5-025

Weingard Plier Utility

Carefully tapered beaks fit easily between brackets and are rounded for safety and comfort. Holds round, Square and rectangular wires up to .22"x.028"(.56x.71mm)

Also Available in TC-Tip

L5-026

Torque Bending Plier Pair use

Designed to place a torque in a specific section of arch wire with out distortion in the reminder of the wire. The pliers use a key (either .016"/.018" or .018"/.022") that torque the section between holding beaks. Labial and lingual torque can be Placed Adjacent to each other easily. Torque can be limited to single tooth.

PLIERS FOR ORTHODONTICS & PROSTHETICS

- Щипцы для ортодонтии и протезирования
- Pincers pour l'orthodontie et la prothèse
- Zangen für Kieferorthopädie und Prothetik
- Щипці для ортодонції та протезування
- Alicates para ortodoncia y prótesis
- كمانشة لتقويم الأسنان بروتستيتيس

L5-027

Tweed plier slim

Designed for placing first, second and third order bends wires up to .022"x.025"(.53mmx.64mm)

Also Available in TC-Tip

L5-028

Lingual Arch Bending plier

Grooved to hold Several Sizes of wire, Jaw Thickness is .12"(3.05mm) Ideal for double and triple back bends. Bends round, Square and rectangular wire up to .036"(0.9mm)max.

L5-029

Band Crimping Plier

This tips allow for easy access into molar and premolar bands.

L5-030

Tweed Arch Forming Plier

Designed for torquing and bending square or rectangular wires. The blades are designed to be parallel at .020" opening. Can be used on wires up to .021"x.025"(.55mx.64mm)

L5-031

Jaraback Pliers

Long, tapered design with fine detail work on serrated tips allows for intricate bends and utility work. Tip sizes are .028" for round and half-moon. Wire bending capacity: .028"

L5-032

Tweed Loop Forming Pliers

The perfect plier for making accurate, omega and closing loops. can be used with round & square wire up to .021"x.025"(.55x.64mm)

L5-033

Young Plier

For labial, lingual, arches and Canine loops. For hard wire up to .028"(0.7mm) max. wire Bending Capacity (.028"(.07mm)) C-1280 Aderer Small (3 jaw plier Small) Same features as the 3 jaw plier but with Slightly Smaller tips for working with wire up to .020"(.51mm) wire Bending Capacity (.020"(.51mm)) C-1281 Aderer Precision aligned tip are rounded for consistent contouring and bending without damaging the archwire. One-piece construction for the double tip ensures Superior strength. Can be used on wire up to .030"(.76mm) wire Bending Capacity .030"(.76mm)

L5-034

Nance Plier

Precision loop forming with four step tips 3mm,4mm,5mm and 6mm, Excellent for round and square wires up to .022"(.56mm) All working edges have been beveled to prevent wire Scoring. wire bending capacity. 022"(.56mm)

L5-035

These Multipurpose Specialty Pliers

are used for easily forming stops, tie backs, or Adams clasps for retainer.

L5-036

V Bend Plier

Creates a 1 mm v bend to any part of the archwire. Provides positive stops and prevent archwires from "walking"

L5-037

De la Rosa with three Grooves

Arch contouring and forming plier with three grooves, for wires .016", .018" and .022"

L5-038

De la Rosa without Grooves

perfect for Subtle Contouring of arch wires up to .030" (.76mm) wire Bending Capacity: .030" (.76mm)

L5-039

Adams plier with Hole

Sling Claps and wire bending pliers

Also Available in TC-Tip

L5-040

Slim Bird Beak Plier

This popular loop forming and bending plier has inserted tips that provide excellent wear. The precise round and square tips bend arch wires from .012" to .020" (.30mm-.51mm) Wire bending capacity: .020" (.51mm)

Also Available in TC-Tip

L5-041

Bird Beak Pliers

The most popular and versatile plier for working with round wire up to .028" (.71mm). The round beak is precision manufacture to a perfect cone wire bending capacity: .028" (.71mm)

Also Available in TC-Tip

L5-042

Light wire Bird Beak Plier

A longer cone than a standard bird beak is useful for forming precise loops in light wires up to .020" (.51mm) wire Bending Capacity: .020" (.51mm)

Instruments for dental implants are made of high quality stainless steel.

Our line of instruments include, but is not limited to, the following products:

Bone Grafting Instruments

- Bone Curettes (SPRATT) – designed for harvesting bone
- Bone Grinder – used in conjunction with a mallet to grind bone into appropriate particle sizes
- Bone Basin – weighted bottom design prevents tipping or spilling while mixing bone or other bone grafting materials

Bone Compactors – feature serrated tips for compacting bone

Scalpels & Biopsy Punches

- Scalpels – offers convenience of a disposable with razor sharp cutting edge for superior cutting
- Biopsy Punches – designed at a steeper angle to ensure a finely honed, sharper edge
- Bone Spreading Chisels
- Freer Chisels – double or single cut tips used for widening ridges during implant preparations

- Graduated Chisels – feature reference markings for measurement during a bone ridge augmentation and are available in straight and curved patterns

Osteotomes

- Concave Osteotomes – break the floor of the maxillary sinus through the implant cavity and are available in curved (off set) and straight (with or without stops)
- Convex Osteotomes – raise the floor of the maxillary sinus and are available in curved (off set) and straight patterns (with or without stops)
- Progressive Osteotomes – designed to prepare the implant site in the maxillary area where bone density is 3 or 4
- Bone Spreading Osteotomes – sharp or blunt configurations for progressive circumferential expansion of the implant site

Sinus Lift Instruments

- Sinus Lift Curettes and Elevators – lightweight, wide diameter stainless steel hand instruments lift the sinus membrane for bone augmentation procedures

Gauges & Calipers

- Gauges & Calipers – various measuring devices available to determine appropriate length, width, and distance for implant procedures

Collagen Products

- Collagen wound dressing product offering includes products.

Sterilization Trays

- Sterilization Trays – designed to protect and store instruments during sterilization, transportation and storage

If an implant cannot be set, since the diameter of the jaw is not sufficient, a piece of bone has to be implanted. The additional bone is extracted e.g. from the lower jaw. The bone piece is then locked onto the compound area with the straight forceps (front tooth sector).
